

Functional Specification Document (FSD)

System User Manual, Workflows & Interactive Flows

PROJECT PLATFORM: MediConnect - Premium MERN Doctor Appointment Platform

REFERENCE PATH: VIP-C2-BOOK-A-DOCTOR

DATE OF EXECUTION: June 16, 2026

AUTHOR / CREATOR: Antigravity AI Engineer & pairing USER

DOCUMENT STATUS: **APPROVED / PRODUCTION-READY**

EXECUTIVE OVERVIEW

This phase-wise document outlines the development lifecycle, system structures, and technical specifications of MediConnect. MediConnect is a clinic-agnostic, hospital-grade scheduling ecosystem built utilizing the MERN stack (MongoDB, Express, React, Node.js). It supports secure JWT access/refresh token structures, comprehensive patient calendars, and simulated multi-modal checkout payment gates.

1. Executive Functional Summary

MediConnect is engineered to serve three distinct system profiles: Patients, Doctors, and Platform Administrators. It provides a secure, clinic-agnostic layout for appointment booking. The system is designed to provide immediate scheduling confirmation, eliminate double-booking via real-time database validation, and process secure simulated transactions.

2. Detailed UI Modules Specifications

Each portal provides access to specific screens designed with premium dark-mode accent features, responsiveness, and clear indicators:

UI Screen	Target Portal	Functional Features & Indicators
Dashboard	Patient Portal features	View active bookings in list cards with Doctor photo, name, fee, date/time, and appointment status.
Checkout Modal	Payment checkout	or specific search queries. A multi-mode panel showing Card entries, UPI scan simulation, Wallet points, and Cash on Appointment.
Analytics Charts	Admin Console views	cancellation operations. Render dynamic charts showing Specialty popularity, Monthly booking stats, and Patient registrations.

3. End-to-End Booking Flowchart

The flowchart below outlines the patient journey from searching for specialized medical experts to completing simulated booking checkout, resulting in dashboard updates.
